

Back-end Peer Review

peer review for assessment 1

Reviewer	Bas Vugts
Reviewee	Aron Pelgrim
Class	tech2a
Teacher	Janno

Checklist

Project is documented and has a readme.md	JA
Are node_modules included in the repository?	NO
Is the package.json correct? Any unnecessary dependencies?	JA
Does the repository and package.json have a license?	JA
Are dependencies and devdependencies split?	JA
Is there a .env file or .env_sample?	NO

Project install

Git clone the repository of your fellow student and install it following the installation guidelines from the readme. Can you get it up and running? Does the readme.md miss essential information?

Yes, the project works without technical problems!	
Kinda, the project runs but gives errors.	

No, because reasons; Vanwege het ontbrekende .env file kan ik geen connectie maken met de database.	X
---	---

1. Application

Node, NPM & Express

 <p>The project has a package.json and packages from NPM are installed; works without</p>	→	 <p>A node server runs with express, and serves up static files</p>	→	 <p>A complex node server runs with express, middleware is used</p>
--	---	--	---	--

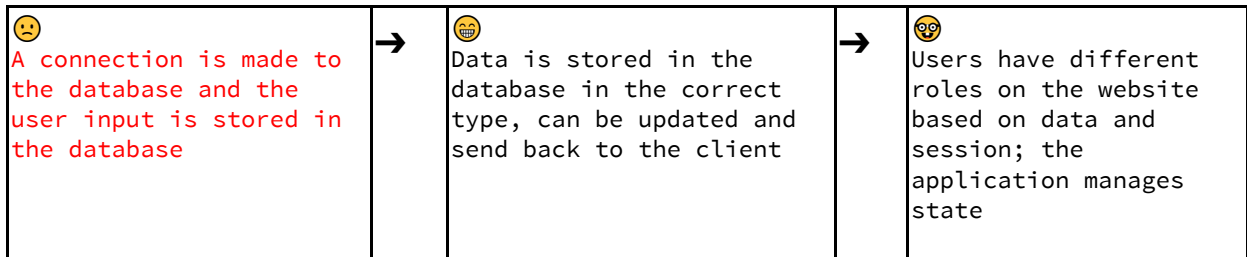

Templating & routing

 <p>You can navigate to routes and the server responds with a resource</p>	→	 <p>A templating engine is used to render, the projects has partials and includes</p>	→	 <p>Advanced express routing, middleware use is complex and query parameters are used</p>
---	---	--	---	--

User input

 <p>The user can fill in a input with post and the server receives the data</p>	→	 <p>The user can fill in a decent form with multiple input types using post, update and delete</p>	→	 <p>The data the server receives is displayed on the client with the templating engine</p>
--	---	---	---	---

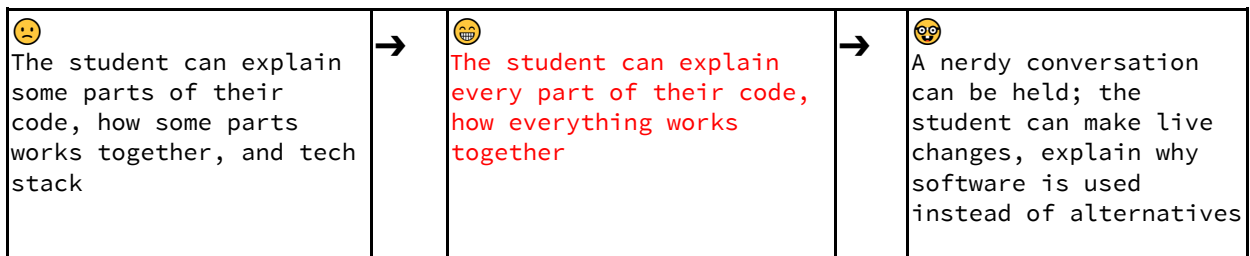

Database & session

Comments

Met een live demo mee gekeken en er wordt wel data naar de database gepusht en opgehaald maar er mist nog een update (en misschien ook delete) function.

2. Understanding

Comments

Aron begrijpt goed wat zijn code doet en weet te omschrijven hoe alles werkt.

3. Quality

Does the readme.md cover what the project does? (concept)	Ja
Does the readme.md include how to install the project? (install)	JA
Is it clear how the database is structured? (model)	No

Code quality

 There is a distinction between ES5 versus ES6, there are code comments throughout the code	→	 The code is readable and consistent, uses modern JavaScript syntax	→	 Code quality is good and enforced, the project is structured logically
--	---	--	---	--

Documentation

 The code, project, and process are partially documented	→	 The docs cover the process and what the project is and does	→	 Docs are more than useful and professional
--	---	--	---	---

Comments

De code ziet er verzorgd uit en de comments in de code maken het extra duidelijk.
